

ADDENDUM TO CONSULTATION ON CENTRALISED PROCESS TO ENSURE SUFFICIENT GENERATION CAPACITY

Date of Addendum: 1 Jun 2023

This addendum serves to provide more information ahead of the Request-for-Proposal (RFP) for the private sector to build, own and operate new generation capacity to be launched by Jul 2023 and will be opened for a period of 3 months.

1. The power system will require at least one new H-class CCGT¹ in 2028, on top of the two new advanced CCGTs by Keppel Infrastructure and Sembcorp Industries to be commissioned in 2026. Nonetheless, EMA is open to other types of generation technology if it is superior in terms of performance capabilities.
2. EMA's preference is for the new H-class to be built on existing utility land. However, a greenfield (indicated as yellow box in Figure 1) may be available for new generation planting to be awarded via the RFP:

¹ More capacity may be needed, depending on the finalised demand and supply outlook.

The location, shape and size of the site is indicative, and may be subject to further changes.
